

Velvet Green Turf Mix

A Quality Landscapers Mix

Mixes or blends provide genetic diversity in a turf stand, which often prevents a single disease, weather condition or seasonal change from adversely affecting the entire stand, maintaining an attractive appearance throughout the entire growing season. Some mixes or blends are made to be very versatile, such as performing well in sun and shade. Other mixes or blends are designed specifically for a particular condition, such as permanent dense shade or sports fields with high traffic. Velvet Green consists of a quality blend of affordable turfgrass varieties.

Characteristics of Velvet Green include:

- Quality mix, with 40% Kentucky Bluegrass, at affordable price.
- Rapid establishment with excellent traffic tolerance.
- Improved varieties provide a soft feel and dark green appearance.

Mix Formulation:

- 40% Kentucky Bluegrasses
- 40% Perennial Ryegrasses
- 20% Fine Fescues

Use
Lawns, Sports Fields, and Parks
